I am appalled by the actions of the NAB and the FCC. The whole purpose of satellite radio was to offer people, like myself, an alternative listening median to the mundane AM and FM stations. XM and Sirius satellite radio services come with a price tag of around \$10 or \$12 dollars, a cost more and more people are willing to shell out every month because they are missing something from regular radio services, which they can obtain for free. I hardly think that XM and Sirius have the advantage because they are pay services and in most cases you also have the extra cost of a satellite receiver. For the NAB to deem this as unfair competition is quite laughable, XM, to which I currently subscribe, is just trying to better their own services for their customers. I think it would be a great idea for XM to offer weather and traffic information to listeners who do not want to have to turn back to FM stations they were fed up with in the first place. The NAB is only adding fuel to the fire in the eyes of the public. They should be focusing more on bettering their own radio services than trying to hinder satellite radio services.
